# 2 Architectural Views

return to Reference Architecture (RA)

The DIDO Reference Architecture (RA) is presented as a series of components collected into different views. The components are then associated with a set of standards relevant to each component. There are two kinds of standards provided, each produced by different kinds of standards bodies:

- tech
- defact

There are three main categories of Architectural Views:

- 1_stakeholder
- 2_tech_views
- 3_taxonomic
