

Consumer Electronics

[Return to Applications](#)

Create a Case Study **WWW WWW...** (e.g., My NASA Project) →

Microprocessors based on MIPS or ARM architectures with memory measured by a few Megabytes or even Kilobytes is the norm for Consumer Electronics applications. However, standards compliance, dynamic discovery, and highly configurable communications is still highly desired while [performance](#) and [scalability](#) is a must.

CoreDX DDS brings the full power of [data_distribution_service_dds](#) with all these features to even the smallest MIPS and ARM devices.
