

Financial

[Return to Applications](#)

Financial systems may be computing powerhouses compared to other [Data Distribution Service \(DDS\)](#) industries. These environments depend on absolutely Secure, Reliable, Real-time data transfer, sometimes over long and unreliable physical connection for large amounts of data messages.

DDS can handle the large [bandwidth](#) and low latencies required over a Reliable [protocol](#), while adding the other powerful features of DDS, including content filtering and dynamic discovery.
