

Wired Network

[Return to Glossary](#)

A **Wired Network** uses cables to connect devices, such as laptop or desktop computers, to the [Internet](#) or another network. A wired network has some disadvantages when compared to a wireless network. The biggest disadvantage is that your device is tethered to a router. The most common wired networks use cables connected at one end to an [ethernet](#) port on the network router and at the other end to a computer or other device.
