

DIDO Domain Community

[Return to Glossary](#)

DIDO Domain Community is the lowest level [Community of Interest \(Col\)](#). The Domain has a sub-[charter](#) approved by the [DIDO Ecosystem Community](#). The Domain usually relies on the Ecosphere for [Bylaws](#) and [Policies and Procedures \(P&P\)](#) but can provide addendums that do not conflict with the Ecosphere. The primary role of the Domain is to produce a product which meets the Functional and Non-Functional Requirements of the Ecosystem and the Ecosphere. As a general rule, the Domain actually builds or deploys things to be integrated into the Ecosystem. The Domain may have more [Intellectual Property \(IP\)](#) Rights than the Ecosystem. It can have a subset the [Copyrights](#) allowed by the Ecosystem.

The Domain role is to build products as per the requirements and maintain products according to the [bug tracking system](#). The Domain is responsible for all testing at the Domain level (See: [4.3.3.5 Testability](#)).
