Polkadot

Return to Glossary

Polkadot is an Open Source Software (OSS) Distributed Ledger Technology (DLT) and Cryptocurrency

an open source, Blockchain Platform and Cryptocurrency allowing for distributed computing. The network uses a Proof of Stake (PoS) cConsensus Algorithm. The Protocol uses Blind Assignment for Blockchain Extension (BABE), is derived from Ouroboros.[3] The protocol was adapted by the Ethereum co-founder Gavin Wood and is developed by the Web3 Foundation with the initial implementation by Parity Technologies.[citation needed]

In June 2021, Coinbase added Polkadot to its cryptocurrency trading platform.
