Linux Foundation: Open Messaging

return to the Linux Foundation

Note: The following is an excerpt from the official Open Messaging site. It is provided here as a connivence and is not authoritative. Refer to the original document as the authoritative reference.

OpenMessaging, a vendor-neutral open standard for distributed messaging and streaming, which includes the establishment of industry guidelines and messaging, streaming specifications to provide a common framework for finance, e-commerce, IoT and big-data area. The design principles are the cloud-oriented, simplicity, flexibility, and language independent in distributed heterogeneous environments. Conformance to these specifications will make it possible to develop a heterogeneous messaging applications across all major platforms and operating systems.

Table 1: Data sheet for Open Messaging,

Title	OpenMessaging
Acronym	
Version	under development
Operating Systems	Where ever Java SE runs
