Apache Software Foundation (ASF)

return to the Technical Standards area

Source: About the Apache Software Foundation (ASF)

> *The mission of the Apache Software Foundation (ASF) is to provide software for the public good. We do this by providing services and support for many like-minded software project communities consisting of individuals who choose to participate in ASF activities.*
> *committers. Through the ASF's meritocratic process known as "The Apache Way," more than 730 individual Members and 7,000 Committers successfully collaborate to develop freely available enterprise-grade software, benefiting millions of users worldwide: thousands of software solutions are distributed under the Apache License; and the community actively participates in ASF mailing lists, mentoring initiatives, and ApacheCon, the Foundation's official user conference, trainings, and expo.*

Note Although the ASF is a Corporate Project and thus, strictly speaking a [dido:public:ra:xapend:xapend.a_glossary:d:defactostd|de facto standards]] organization, the Apache License is part of the larger Open Source Initiative (OSI) and thus, considered a Technical vice *de facto* Standard.
