Abstract

The excitement, expansion, and advancement in Distributed Computing resulting from Satoshi Nakamoto’s paper “Bitcoin: A Peer-to-Peer Electronic Cash System”[1] highlights the need for a Reference Architecture (RA) focused on Distributed Immutable Data Objects (DIDOs), where it is understood that DIDOs include, but are not limited to cryptocurrencies, the original blockchain, and distributed ledger technologies. This paper, an OMG Discussion paper, presents an RA for DIDOs.

Book Contents

- Front Matter
- Table of Contents

- 1 Introduction
- 2 Architectural Views
- 3 Governance
- 4 Requirements

- **xapend_test**
- xapend.a_glossary
- xapend.b_stds
- xapend.c_hwarch
- xapend.d_opsys
- xapend.e_tools
- xapend.f_qos
- xapend.g_testing
- xapend.h_acronyms
- xapend.i_cog_model
- xapend.j_gov_model
