      - a. Cover Page
      - b. Change Log
      - c. Abstract
      - d. Copyright Notice
      - e. Table of Contents
      - f. Preface
    - 1 Introduction
      - 1.2 Purpose
      - 1.1 Problem
      - 1.3 Content Organization
    - 2 Architectural Views
      - 2.1 Stakeholder Views
        - 2.1.1 Platform View
        - 2.1.2 Domain View
        - 2.1.3 Ecosystem View
        - 2.1.4 Ecosphere View
        - 2.1.5 Exchange View
        - 2.1.6 Enterprise View
        - 2.1.7 Relevant Community Standards
      - 2.2 Technical Views
        - 2.2.1 Fundamental Views
        - 2.2.2 Node Network View
        - 2.2.3 Decentralized Finance (DeFi) Layers
      - 2.3 Taxonomic Views
        - 2.3.1 Network Topology Taxonomy
        - 2.3.2 Network Access Control Taxonomy
        - 2.3.3 Node Taxonomy
        - 2.3.4 Data Taxonomy
        - 2.3.5 Digital Assets
    - 3 Governance
      - 3.1 DIDO Communities

        - 3.1.2 Software Communities
        - 3.1.1 Stakeholder Communities
    - 3.2 Legal Documents
        - 3.2.1 Charter
        - 3.2.2 Bylaws
        - 3.2.3 Policies and Procedures (P&P)
    - 3.3 Guides
- 4 Requirements
    - 4.1 About Requirements
        - 4.1.1 Governance Requirements Model
        - 4.1.2 Cognitive Requirements Model
        - 4.1.3 Governing Roles - Combined Requirements Model
        - 4.1.4 Example of a Using the Combined Requirements Model
        - 4.1.5 The Current State of DIDO Requirements
        - 4.1.6 One Degree of Freedom Rule
        - 4.1.7 Specifying Requirements
    - 4.2 Functional Requirements
        - 4.2.1 Platforms
        - 4.2.2 Access Control
    - 4.3 Non-Functional Requirements
        - 4.3.1 Portability
        - 4.3.2 Reliability
        - 4.3.3 Maintainability
        - 4.3.4 Securability
        - 4.3.5 Manageability
        - 4.3.6 Usability
        - 4.3.7 Performance
        - 4.3.8 Interoperability
        - 4.3.9 Elasticity
        - 4.3.10 Scalability
    - 4.4 Assessing Requirements
        - 4.4.1 Functional Requirements Assessment
        - 4.4.2 Non-functional Requirements Assessment
- Appendices
    - Appendix A: Glossary of Terms Related to DIDO
        - Glossary !-* Terms
        - Glossary 0-9 Terms
        - Glossary A Terms
        - Glossary B Terms
        - Glossary C Terms
        - Glossary D Terms
        - Glossary E Terms
        - Glossary F Terms
        - Glossary G Terms
        - Glossary H Terms
        - Glossary I Terms
        - Glossary J Terms
        - Glossary K Terms

    - Glossary L Terms
    - Glossary M Terms
    - Glossary N Terms
    - Glossary O Terms
    - Glossary P Terms
    - Glossary Q Terms
    - Glossary R Terms
    - Glossary S Terms
    - Glossary T Terms
    - Glossary U Terms
    - Glossary V Terms
    - Glossary W Terms
    - Glossary X Terms
    - Glossary Y Terms
    - Glossary Z Terms
- Appendix B: Standards Organizations
    - de facto Standards Bodies
    - Technical Standards Bodies
- Appendix C: Hardware Architectures
    - C.1 Embedded Systems
    - C.2 Servers
    - C.3 Desktops
    - C.4 Handheld Computers
    - C.6 Network Devices
    - C.5 Supercomputers
- Appendix D: Operating Systems
    - Android
    - Apstra
    - Azure Real Time Operating System (or Azure RTOS)
    - Azure Sphere OS
    - balenaOS
    - Blackberry QNX
    - CentOS
    - Chromium OS
    - Cisco Digital Network Architecture (Cisco DNA)
    - Cisco Internetwork Operating System (IOS)
    - Cisco IOS XR
    - Cisco NX-OS
    - ClearOS
    - CloudReady
    - ExtremeXOS
    - FreeBSD
    - FreeRTOS
    - IBM i
    - iOS
    - Junos operating system (Junos OS)
    - LynxOS RTOS
    - MacOS

    - Nokia X Software Platform
    - Open Network Linux
    - OpenServer
    - Oracle Linux (OL)
    - Oracle Solaris
    - Red Hat Enterprise Linux (RHEL)
    - SANtricity Software Operating System (OS)
    - SCO UnixWare
    - SUSE Linux Enterprise Server (SLES)
    - TrueNAS
    - Ubuntu Linux
    - Windows
    - Windows IoT
    - Windows NT
    - Windows Server
    - Windows XP
- Appendix E: Tools
    - Tools: Bug and Issue Tracking
    - Tools: Code Reviews
    - Tools: Contributor License Agreements (CLA)
    - Tools: Source Code Scanning and License Compliance
    - Tools: Logging Tools
    - Tools: Network Traffic Analysis
    - Tools: Open Source Paradigm
    - Tools: Tracking Project Health
    - Tools: GitHub Management at Corporate Scale
    - Tools: Project Quality
    - Tools: Archiving and Release Management
- Appendix F: DDS Quality Of Service
    - F.1 User Data
    - F.11 Liveliness
    - F.7 Deadline
    - F.17 Destination Order
    - F.4 Durability
    - F.5 Durability Service
    - F.20 Entity Factory
    - F.3 Group Data
    - F.18 History
    - F.8 Latency Budget
    - F.16 Lifespan
    - F.9 Ownership
    - F.10 Ownership Strength
    - F.13 Partition
    - F.6 Presentation
    - F.22 Reader Data Lifecycle
    - F.14 Reliability
    - F.19 Resource Limits
    - F.12 Time Based Filter

        - F.2 Topic Data
        - F.15 Transport Priority
        - F.21 Writer Data Lifecycle
    - Appendix G: Tests
    - Appendix H: Acronyms
    - Appendix I: Cognitive Model
    - Appendix J: Governance Model
    - Appendix K: DIDO Consensus Algorithms
        - K.1 Definition of Terms
        - K.2 Consensus Objectives
        - K.3 Consensus Mechanisms
        - K.4 Consensus Platforms
        - K.5 Consensus Algorithm References
    - Appendix L: Governance, Regulation and Compliance
        - Data Governance
        - U.S. Federal Data Strategy
        - Health Insurance Portability and Accountability Act (HIPAA) Compliance
    - Appendix M: Financial Laws, Regulations and Authorities
    - Appendix N: Understanding Gas
- Command Line Interface (CLI)
    - Front Matter
        - OMG Discussion Paper Disclaimer
        - a. Cover Page
        - b. Summary of Changes
        - c. Abstract
        - d. Copyright Notice
        - e. Table of Contents
        - f. Preface
    - Contents
        - Part I: CLI Technical Details
            - 1.0 Introduction
            - 2.0 DIDO CLI Background
            - 3.0 DIDO CLI Language Constructs
            - 4.0 DIDO Data Lifecycle Language (DDLL)
            - 5.0 DIDO Data Definition Language (DDDL)
            - 6.0 DIDO Manipulation Language (DDML)
        - Part II: User Scenarios
            - User Scenario: Aerospace
            - User Scenario: Agriculture
            - User Scenario: Defense
            - User Scenario: Decentralized Finance (DeFi)
            - User Scenario: Disadvantaged_intermittent_links_dils
            - User Scenario: Identity
            - User Scenario: Industrial_processing
            - User Scenario: Medical
            - User Scenario: Regulation
            - User Scenario: Supply Chain
        - Part III: Appendices

        - A.1 Basic Ethereum Data Store
    - License Agreements
    - Test Environment (TE) Systems Description
